EXPERIENCE

Fullstack Software Engineer

|

Hemmersbach, Wroclaw, PL

04/2023 – 04/2026 – 3 years

Developing and maintaining Hemmersbach’s in-house business management software designed to support all aspects of project delivery in compliance with industry standards. My team was in charge of developing the tools required to onboard additional departments and introducing automation features to provide company-wide efficiency gains.

- Maintained and expanded the app’s flagship feature, AIDLOG, a task and project management module allowing managers to supervise task assignment and track workload per project per team member
- Reworked the REST API backend and Eloquent/SQL queries to reduce by 70% the load times of the main AIDLOG dashboard and free resources to allow new features to be added: per user custom filters and table layouts, all projects at a glance, automatic creation and reassignment of tasks after specific project events (leaving team member, new project phase)
- Rebuilt the app’s Forms module, from class based JavaScript to modern Typescript standards and custom React hooks, allowing to provide users with smarter dashboard views, more complex form inputs and workflow automation, and use this tool at large scale to gather client’s feedback for ISO audits
- Built a suite of backend processes to facilitate the handover of business responsibilities for key project members in case of absences, anticipating leaves, notifying stakeholders, and re-assigning critical tasks to prevent interruptions of service
- Led an effort to audit and eliminate flaky tests to reduce wasted dev and server time, saving a few hours per month
- Rebuilt HR’s recruitment bonus app: Led the effort to build custom UI components for data tables to improve readability and clear access to large data sets, resulting in a faster grant process and lowering the risk of user errors. Custom code to be able to display, sort, filter, edit and export hundred of archive records with no loadings and <5ms re-renders
- Strong cross-team cooperation skills, driving change and work practice improvements, periodic L2 support shifts, code reviews

Project Manager

|

Alstom Konstal, Chorzów, PL

03/2018 – 04/2021 – 3 years

- Supervised the project planning of 5-to-20-person teams and the workload of the department (100+ people)
- Self-taught VBA to create management and team tracking tools for the team leads, supporting an improvement of On-time delivery KPI from 70/80% to a sustained >95%

PROJECTS

Support Desk and Dev Bootcamp: Demo apps to practice Node.js, Express and deploying to Render/AWS

SKILLS

Frontend: Typescript, React, Next.js, shadcn/ui, Tailwind, MaterialUI, Redux, zustand, PWA
Backend: php, Laravel, REST APIs, PHPUnit, Node.js, Express.js, MySQL, MongoDB
Tools: Docker, git, AI tools (JetBrains’ Junie, Claude Code), AWS
Languages: French (Native, C2), English (Fluent, C2), Polish (Intermediate, B1)

EDUCATION & QUALIFICATIONS

École Nationale Supérieure d’Arts et Métiers

Master of Science M.Sc., General Engineering

Paris, FR

06/2015

Hemmersbach SDC Academy

6-months full-time fullstack software course

Improving React/SQL skills and knowledge of design patterns, learned php and Laravel from zero in <2 months

Wroclaw, PL

10/2023
